

Name _____

A Day in the Life of a Moth

Short Answer Key

1. Nocturnal means being active at night.
2. Moths stay safe by blending in with their surroundings using natural camouflage.
3. Male moths use their antennae to detect the scent of females, and they meet to mate.
4. A solitary lifestyle reduces competition for food and makes them less noticeable to predators.
5. Moths contribute by pollinating flowers and serving as food for animals like birds and bats.
