

Name _____

How Moths Reproduce

Short Answer Key

1. Male moths release pheromones to attract females.
2. Female moths choose spots that provide food and safety for their caterpillars after they hatch.
3. Warmer temperatures speed up the time it takes for moth eggs to hatch.
4. Caterpillars feed on nearby plants to grow and prepare for their next life stage.
5. Moths ensure their young survive by laying eggs in food-rich environments.
