

Name _____

Marvelous Moths: Nature's Nighttime Flyers

Short Answer Key

1. Moths are active at night because their dull colors help them stay hidden from predators, and they use their excellent sense of smell to find food and mates.
2. Moths' wings are covered with tiny scales that can shimmer and help them fly quietly.
3. Moths help plants grow by spreading pollen while feeding on nectar.
4. The process is called metamorphosis.
5. Some moth species are considered pests because they damage crops or clothing.
