## How Lions Move

### Short Answer Key

1. Lions run for short distances because running fast takes a lot of energy.
2. Lions use their legs to crouch low, run fast, and jump far when hunting.
3. Lions are good hunters because they are fast, strong, and work together.
4. Lions don't climb trees often because they are heavy and prefer the ground.
5. Lions work together by surrounding their prey to make it harder for the prey to escape.
