

Name _____

How Do Meerkats Move?

Short Answer Key

1. Meerkats have long, slender bodies and powerful legs that help them run fast.
2. Climbing allows meerkats to spot predators from a distance and stay alert.
3. Bipedal standing is when meerkats stand on their hind legs to see their surroundings better.
4. Meerkats use their strong back legs to run quickly across sandy terrain.
5. Meerkats do not fly or swim because their bodies are built for running and climbing instead.
