

Name _____

How Does a Rabbit Move?

Short Answer Key

1. Rabbits primarily move by hopping.
2. Rabbits can run up to 30 miles per hour in short bursts.
3. Zig-zagging is when rabbits quickly change directions while running to confuse predators.
4. A rabbit's strong hind legs help it jump far, move quickly, and escape predators.
5. Rabbits aren't good at climbing trees because their bodies are built for hopping and running on the ground.
