

Name _____

Protists Unveiled: Exploring Their Natural Abodes

Multiple Choice Questions

1. Where can protists be found in abundance?
 - A) Only in freshwater ponds
 - B) Only in marine environments
 - C) In both freshwater and marine environments
 - D) Only in terrestrial environments

2. What role do aquatic protists play in ecosystems?
 - A) Producing oxygen
 - B) Serving as foundational organisms in food webs
 - C) Contributing to nutrient cycling
 - D) All of the above

3. In which environment are soil protists primarily found?
 - A) Terrestrial environments
 - B) Marine environments
 - C) Freshwater habitats
 - D) Extreme environments

4. Where are diatoms commonly found?
 - A) Hot springs
 - B) Polar regions
 - C) Deep-sea hydrothermal vents
 - D) Marine environments

5. What makes protists unique in extreme environments?
 - A) They cannot survive in extreme environments
 - B) They have evolved unique adaptations
 - C) They are only found in freshwater habitats
 - D) They are primarily photosynthetic organisms
