

Name _____

The Nose and Mouth: Your Breathing Buddies

Short Answer

1. Explain how the nose filters the air we breathe.
2. What happens to the air when it passes through the nose, and why is this important for the respiratory system?
3. When might you switch from breathing through your nose to breathing through your mouth, and why?
4. Describe the roles of the mouth in both breathing and communication.
5. How do your nose and mouth work together to ensure proper breathing during different activities?
