## Plastic Seas and Vanishing Coral: Human Impact on Ocean Pollution and Marine Life

### Multiple Choice Questions

1. What is a significant contributor to ocean pollution caused by human activities?
  - a) Volcanic eruptions
  - b) Plastic pollution
  - c) Natural algae blooms
  - d) Whales and dolphins
  
2. How do microplastics affect marine life?
  - a) They have no impact on marine life.
  - b) Marine life uses microplastics for shelter.
  - c) Marine animals often ingest microplastics, which can harm them and enter the food chain.
  - d) Microplastics make marine animals more colorful.
  
3. What is overfishing, and why is it a concern for marine ecosystems?
  - a) Overfishing refers to catching fish for fun.
  - b) Overfishing is the process of catching fish without limits, leading to population declines and ecosystem imbalances.
  - c) Overfishing is essential to maintain healthy fish populations.
  - d) Overfishing has no impact on marine ecosystems.
  
4. How does climate change contribute to coral reef bleaching?
  - a) Climate change has no impact on coral reefs.
  - b) Rising sea temperatures caused by climate change can stress corals, leading to bleaching events.
  - c) Corals thrive in warmer waters.
  - d) Coral reefs are immune to rising temperatures.
  
5. What is the focus of Chris Jordan's artwork, and what message does he aim to convey?
  - a) Chris Jordan's art focuses on space exploration.
  - b) His art has no message or theme.
  - c) His artwork highlights the consequences of human consumption and waste, particularly the devastating impact of plastic pollution on marine life.
  - d) Chris Jordan's art focuses exclusively on abstract patterns.
