## Mastering the Basics: Exploring the Four Arithmetic Operations

### Multiple Choice Questions

1. What is addition?

- a) Combining numbers to find their total sum
- b) Taking away one number from another
- c) Repeated subtraction
- d) Sharing a quantity into equal parts

2. What is subtraction?

- a) Combining numbers to find their total sum
- b) Taking away one number from another to find the difference
- c) Repeated addition
- d) Sharing a quantity into equal parts

3. What is multiplication?

- a) Taking away one number from another
- b) Combining numbers to find their total sum
- c) The process of repeated addition and finding the total of equal groups of numbers
- d) Sharing a quantity into equal parts

4. What is division?

- a) Taking away one number from another
- b) Combining numbers to find their total sum
- c) The process of repeated addition and finding the total of equal groups of numbers
- d) Partitioning a quantity into equal parts or groups

5. Which arithmetic operation is like creating rows and columns in a garden to plant seeds?

- a) Addition
- b) Subtraction
- c) Multiplication
- d) Division
