## The Sneaky Strategies of Parasitic Invasion

### Short Answer Key

1. Through direct contact with the host's skin.
2. By consuming raw or undercooked meat containing tapeworm larvae.
3. By making infected rodents less fearful of predators like cats.
4. A vector is an organism that transmits parasites from one host to another, such as infected ticks transmitting Lyme disease to humans through their bite.
5. Contracting parasitic infections from organisms like protozoa.
