Cracking the Code: Creating Strong and Secure Passwords

Open-Ended Response Questions

1. Imagine you need to create a strong and secure password for your email account. Describe the steps you would follow to come up with a password that meets all the criteria.
2. Think about a situation where someone you know had their online account compromised because of a weak password. What advice would you give them to prevent it from happening again?
3. Why is it crucial to have a unique password for each online account you use? Provide an example of how password reuse can lead to problems.
4. Share a personal experience or story related to password security. It could be about creating a strong password, using a passphrase, or any situation where password security played a role.
