

Name _____

Unveiling the Pathogen Puzzle: Where Do They Hide?

Short Answer Key

1. Doorknobs
2. Contaminated water sources can contain bacteria, viruses, or parasites that can cause diseases like diarrhea or cholera when ingested.
3. To prevent the spread of pathogens from contaminated surfaces, you can regularly clean and disinfect frequently touched surfaces like doorknobs, light switches, and countertops.
4. Salmonella (from undercooked poultry, eggs, or unpasteurized milk)
5. Insect repellent can help prevent the transmission of diseases carried by mosquitoes by repelling mosquitoes and reducing the likelihood of getting bitten
