The Shocking Truth: Why Aren't More People Buying Electric Cars?

Short Answer Key

1. Government incentives can reduce the upfront purchase price of electric cars through tax credits, rebates, and reduced registration fees.
2. Charging infrastructure is crucial because it determines the convenience and accessibility of charging electric cars, addressing range anxiety and supporting adoption.
3. Consumers can address range anxiety by planning their routes to include charging stops, using fast-charging stations, and considering electric cars with longer ranges.
4. Some consumers worry about the resale value of electric vehicles because newer models often have improved battery technology, potentially reducing the value of older electric cars.
5. The limited availability of used electric cars can limit options for budget-conscious buyers and slow down adoption.
