## Where Does a Praying Mantis Live?

### Short Answer Key

1. Ideal habitats for praying mantises include forests, grasslands, gardens, and deserts with plenty of plants.
2. Tropical and subtropical regions provide warm climates and many insects for mantises to eat.
3. Praying mantises use plants for camouflage and as hiding spots to ambush prey.
4. Praying mantises can live in gardens, which provide food and shelter.
5. Two threats to praying mantises are habitat loss and climate change.
