

Name _____

What Are Raccoons' Predators and Threats?

Short Answer Key

1. Coyotes and owls are two natural predators of raccoons.
2. Habitat destruction reduces the places raccoons can live and find food, making survival harder.
3. Two common diseases raccoons face are rabies and distemper.
4. Raccoons climb trees to escape predators and stay safe.
5. Raccoons are adaptable because they can solve problems, find food in different environments, and avoid threats.
