

Name _____

How Does a Raccoon Move?

Short Answer Key

1. Raccoons use climbing to escape predators and find safe places to rest.
2. Swimming helps raccoons catch food like fish, frogs, and crayfish.
3. Raccoons run in a zigzag pattern to confuse predators.
4. Raccoons' front paws are dexterous, allowing them to grip objects and open containers.
5. Their ability to climb, swim, and run helps raccoons adapt to different environments and escape danger.
