

Name _____

Koalas and Their Relationships with Other Species

Open-Ended Response Answer Key

1. Koalas have limited relationships because they are solitary animals and do not rely on other species except for food.
2. Protecting koalas ensures eucalyptus forests remain healthy, which benefits many other species.
3. If koalas did not eat eucalyptus leaves, the trees might become overgrown, affecting forest balance.
4. Humans can protect koalas by preserving their habitats, preventing deforestation, and supporting wildlife protection programs.
