

Name _____

How Leopards Reproduce

Short Answer Key

1. Male leopards find female leopards using scent markings and vocalizations.
2. After mating, the male leaves, and the female raises the cubs alone.
3. Cubs are born blind and helpless to ensure they stay hidden and protected.
4. The mother keeps them hidden in a den and moves them if necessary.
5. Cubs leave their mother at around two years old.
