

Name _____

How Does a Komodo Dragon Reproduce?

Short Answer Key

1. Male Komodo dragons wrestle each other for the female's attention.
2. A female Komodo dragon usually lays around 20 eggs.
3. The incubation period is about 7 to 8 months.
4. Baby Komodo dragons climb trees to avoid being eaten by adult dragons and other predators.
5. Komodo dragons take up to 8 years to reach full size.
