## Egg-citing Amphibians: Exploring the Reproduction of Frogs, Toads, and More

### Short Answer Key

1. Frogs lay their eggs in water.
2. Frog eggs are typically small, round, and covered in a gelatinous substance.
3. Salamander eggs are usually found on land in moist environments, such as under logs or rocks.
4. A characteristic of caecilian reproduction is that they give birth to live young.
5. Amphibian eggs are important for the survival of their species because they provide a safe environment for developing embryos and ensure the continuation of the amphibian life cycle.
