## What Does a Rhinoceros Eat?

### Short Answer Key

1. Rhinos are herbivores because they only eat plants and not meat.
2. African rhinos eat grass, leaves, and bushes.
3. The black rhino's hooked lip helps it grab leaves, branches, and twigs from bushes and trees.
4. Rhinos eat in the morning and evening because it is cooler during those times.
5. Conservationists protect rhino habitats to ensure they have enough plants to eat.
