

Name _____

Daily Habits and Behaviors of Rhinoceroses

Open-Ended Response Answer Key

1. Rhinos are more active during cooler times of the day because it helps them conserve energy and avoid overheating.
2. If rhinos didn't have enough space, they might fight over territory or struggle to find enough food, leading to stress and possible population decline.
3. Rhinos' habits, like mud baths and scent communication, help them stay healthy, claim territory, and interact with others, which is essential for survival.
4. To understand rhino behavior, I would observe when they are most active, how they interact with others, and how they use their environment, like mud or trees, in their daily routines.
