

Name _____

How Does a Rhinoceros Reproduce?

Short Answer Key

1. Male rhinos compete by marking territory or fighting to attract a female.
2. The long gestation period ensures the calf is strong and healthy when born.
3. A newborn rhino calf typically weighs between 70 and 150 pounds.
4. Mother rhinos protect their calves, teach them how to find food, and help them avoid danger.
5. Rhinos are at risk due to habitat loss and poaching.
