

Name _____

How Does a Rhinoceros Reproduce?

Open-Ended Response Answer Key

1. Rhino calves stay with their mothers to learn essential survival skills like finding food and avoiding danger.
2. If poaching and habitat loss continue, rhino populations could decline even further, possibly leading to extinction.
3. Protecting rhinos helps maintain biodiversity and ensures that future generations can benefit from these animals' role in ecosystems.
4. Strategies might include creating more protected reserves, increasing anti-poaching efforts, and educating communities about rhino conservation.
