

Name _____

How Does a Rhinoceros Move?

Short Answer Key

1. Rhinos run fast to escape danger or defend themselves.
2. A rhino uses its horn to point at the threat and scare it away during a charge.
3. Rhinos don't climb or fly because their large size and body shape are not suited for those activities.
4. Rhinos create trails through thick vegetation that smaller animals can use.
5. Rhinos are well-suited to navigate grasslands, savannas, and thick vegetation.
