

Name _____

The Rock Cycle: A Journey Through Earth's Rock Transformations

Short Answer

1. Explain how igneous rocks form, and provide an example of each type.
2. Describe the transformation that sedimentary rocks undergo to become metamorphic rocks.
3. What are some common forces of weathering and erosion, and how do they shape the Earth's surface?
4. How do sedimentary rocks contribute to our understanding of Earth's history?
5. Give an example of a metamorphic rock and explain how it differs from its parent rock.
