

Name _____

Sacred Structures

Short Answer – Answer Key

1. Churches in Christianity serve as places of worship, where Christians gather for religious services, including Mass and Sunday worship. A distinctive architectural feature commonly found in churches is stained glass windows, which depict religious scenes and symbols.
2. A mihrab in a mosque is a niche or alcove in the wall that indicates the direction of Mecca, the holiest city in Islam. It is significant because it guides Muslims during prayer to face the Kaaba in Mecca.
3. Site selection is essential in the construction of religious buildings because it determines the accessibility, sacredness, and community suitability of the location, aligning with religious and cultural needs.
4. One unique architectural element found in gurdwaras is the Nishan Sahib, a flagpole with the Sikh flag (Sikh Nishan Sahib) that symbolizes the Sikh religion's presence and ideals.
5. The consecration or dedication ceremony in the construction of religious buildings is significant as it marks the building's sanctification for religious use. It involves prayers, rituals, and blessings conducted by religious leaders to ensure the building's spiritual readiness for worship and religious activities.
