Picture-Perfect Focus: How to Capture Sharp and Well-Focused Photos

Multiple Choice Questions

1. What is the primary purpose of autofocus in photography?
 - a) To adjust the camera's exposure settings
 - b) To ensure that the subject is sharp and clear
 - c) To add artistic effects to photos
 - d) To control the camera's flash

2. Which autofocus mode is suitable for capturing fast-moving subjects like sports or wildlife?
 - a) Single Autofocus (AF-S)
 - b) Continuous Autofocus (AF-C)
 - c) Automatic Autofocus (AF-A)
 - d) Manual Focus (MF)

3. How can you minimize camera shake and ensure sharper photos?
 - a) Use a tripod or stabilize the camera on a solid surface
 - b) Increase the ISO setting
 - c) Use a large aperture (low f-number)
 - d) Choose a slow shutter speed

4. When might manual focus be a better choice than autofocus?
 - a) In all photography situations
 - b) When capturing landscapes
 - c) In challenging lighting conditions or when autofocus isn't reliable
 - d) When photographing stationary subjects only

5. What is the benefit of taking multiple shots with slightly different focus points?
 - a) It reduces the need for autofocus
 - b) It ensures that all shots will be perfectly focused
 - c) It increases the chances of capturing at least one perfectly focused image
 - d) It enhances the depth of field in each shot
