## What Does a Sloth Eat?

### Short Answer Key

1. The main component of a sloth's diet is leaves.
2. A sloth's stomach has multiple compartments that help it break down tough leaves and extract nutrients.
3. Sloths stay in one tree for a long time to avoid predators and conserve energy.
4. Sloths help plants grow by spreading seeds through their droppings.
5. Sloths use their claws to grip branches and climb through the treetops to find food.
