

Name _____

What Is a Sloth's Life Cycle Like?

Open-Ended Response Answer Key

1. The baby sloth's relationship with its mother helps it learn survival skills, like climbing and finding food, which are essential for living in the rainforest.
2. Sloths might be solitary because it reduces competition for food and helps them stay hidden from predators.
3. If rainforests were destroyed, sloths would lose their habitat, making it hard for them to find food and survive.
4. The sloth's life cycle, including its slow growth and quiet lifestyle, helps it adapt to the rainforest by conserving energy and avoiding predators.
