## How Does a Sloth Communicate?

### Short Answer Key

1. Baby sloths make high-pitched squeaks to call for their mothers if they get separated.
2. Male sloths use their scent glands to mark their territory and attract females.
3. Sloths show aggression by swiping their claws or making themselves appear larger.
4. The greenish color from algae helps sloths blend into the trees and avoid predators.
5. During mating season, sloths communicate using soft, low-pitched calls.
