

Name _____

All About Sloths

Short Answer Key

1. The two types of sloths are two-toed sloths and three-toed sloths.
2. Algae help sloths survive by camouflaging them in the trees to hide from predators.
3. Sloths use their claws to grip tree branches and hang upside-down.
4. Sloths are good swimmers because their bodies are naturally buoyant and they use their limbs to paddle.
5. Sloths help the rainforest by spreading seeds and providing a home for insects in their fur.
