

Name _____

Could the Entire World Run on Solar Power Someday?

Open-Ended Response Answer Key

1. A big challenge is that the sun doesn't shine all the time, so we need good batteries to store energy.
2. They could add solar panels to rooftops or use solar lights in playgrounds or parks.
3. Because the environment is a global issue, and energy problems in one place can affect others.
4. I could turn off lights when I leave a room or talk to my family about using solar power.
