## How Does a Squirrel Communicate?

### Short Answer Key

1. Squirrels make chirping, chattering, and loud "kuk-kuk" sounds to communicate.
2. A squirrel flicks its tail back and forth to warn others of danger or scare predators.
3. Scent marking helps squirrels claim territory or attract a mate.
4. Deceptive caching tricks other animals and keeps a squirrel's food safe.
5. Squirrels use body language, like standing on their hind legs, to signal danger.
