## Where Do Stick Insects Call Home?

### Short Answer Key

1. Stick insects prefer habitats with many plants because they provide food and places to hide.
2. Stick insects can live in forests and grasslands.
3. Predators of stick insects include birds and lizards.
4. Stick insects are commonly found in tropical regions like Southeast Asia and Australia.
5. Stick insects use camouflage to blend into their surroundings, such as trees and bushes, making it hard for predators to see them.
