

Name _____

What Do Stick Insects Eat?

Short Answer Key

1. Stick insects like to eat fresh leaves from plants like eucalyptus, ivy, and bramble.
2. Stick insects eat at night to avoid predators that are more active during the day.
3. Stick insects climb trees and shrubs to find leaves to eat.
4. Stick insects get moisture from the leaves they eat, so they don't need to drink water.
5. Camouflage helps stick insects stay hidden from predators while they eat.
