

Name _____

What Do Stick Insects Eat?

Open-Ended Response Answer Key

1. Stick insects are picky about the plants they eat because they need specific nutrients from certain types of leaves.
2. By eating at night and using camouflage, stick insects stay hidden from predators while feeding.
3. As a stick insect, I would climb a tree at night, look for tender leaves, and eat quietly while blending into the branches.
4. The right plants provide stick insects with food and moisture, so living in a habitat with the right vegetation is crucial for their survival.
