

Name _____

The Amazing Stick Insect

Short Answer Key

1. Camouflage is the ability to blend into surroundings. Stick insects use it to hide from predators by looking like sticks or leaves.
2. Stick insects eat at night to avoid being seen by predators.
3. If a stick insect loses a leg, it can escape danger and may regrow the leg later.
4. Stick insect eggs look like seeds, which helps them stay hidden and safe from predators.
5. Stick insects eat leaves, flowers, and stems.
