

Name _____

The Role of Stick Insects in the Ecosystem

Short Answer Key

1. Birds and lizards are two predators that eat stick insects.
2. Stick insects spread seeds through their droppings, helping plants grow in new areas.
3. Stick insects' droppings enrich the soil, making it healthier for plants.
4. Scientists study stick insects' camouflage to design better materials and technology.
5. Protecting habitats ensures stick insects can survive and continue their role in the ecosystem.
