## The Daily Life of Stink Bugs

### Short Answer Key

1. "Diurnal" means being active during the day.
2. Stink bugs communicate using pheromones and sometimes vibrations or sounds.
3. Stink bugs become less active at night because they rest in safe places.
4. They gather in warm shelters like cracks in buildings or under tree bark to survive the winter.
5. Stink bugs might hide under tree bark or in cracks in buildings during colder seasons.
