

Name _____

Sunlight SOS: What Happens to Plants When They Don't Get Enough Sun?

Short Answer

1. Describe the process of photosynthesis and why it's essential for plant survival.
2. Explain why a lack of sunlight can lead to leggy growth in plants.
3. How do plants adapt to low-light conditions, and what advantage does this adaptation provide?
4. What are some ways to provide indoor plants with sufficient sunlight when natural sunlight is limited?
5. Discuss the importance of photosynthesis in the broader ecosystem and its role in supporting all living organisms.
