

Name _____

Pando Grove: Nature's Epic Superorganism

Short Answer Key

1. The Pando Grove is located in Fishlake National Forest, Utah, and it is often called the "Trembling Giant."
2. Pando is unique because it's not a collection of individual trees but a single, massive organism connected by a vast underground root system.
3. The trees in Pando Grove support each other by sharing nutrients and water through their root system.
4. Pando faces challenges such as human activity and changing environmental conditions. Conservation is important to protect this natural wonder for future generations to enjoy.
5. In the fall, Pando Grove dazzles visitors with a synchronized display of golden leaves, which happens because the interconnected trees send nutrients and water to support one another.
