

Name _____

Inside the World of Surgeons: Saving Lives, One Incision at a Time

Short Answer Key

1. To become a Surgeon, individuals need to complete a bachelor's degree, followed by four years of medical school. Afterward, they undergo residency training in their chosen surgical specialty, which can take several additional years.
2. One skill that Surgeons should possess is "dexterity and hand-eye coordination," which is important for performing precise surgical procedures.
3. A Surgeon might perform tasks such as making incisions, removing tissues or organs, and suturing incisions during a typical day in the operating room.
4. Empathy and compassion are crucial for Surgeons to provide emotional support to patients and their families during challenging medical journeys.
5. Staying up-to-date with the latest advancements benefits Surgeons by allowing them to offer the most current and effective treatments to their patients.
