

Name _____

Larry Page & Sergey Brin: The Creators of Google

Larry Page and Sergey Brin are two of the most important people in the history of the Internet. They created Google, the most popular search engine in the world. Their invention changed how people find information and made the Internet easier to use for everyone.

Early Life and Education

Larry Page was born on March 26, 1973, in Michigan, USA. His parents were both computer scientists, and he grew up surrounded by technology. From a young age, he loved inventing things and learning how computers worked.

Sergey Brin was born on August 21, 1973, in Moscow, Russia. When he was six years old, his family moved to the United

States. He was very interested in math and computers, and he enjoyed solving difficult problems. Both Larry and Sergey studied computer science at Stanford University, where they met and became friends.

The Idea for Google

In 1996, while studying at Stanford, Page and Brin started working on a project to organize the huge amount of information on the Internet. At that time, search engines were not very good at finding useful websites. They wanted to create a better way for people to search for information online. Their idea was to rank web pages based on how many other websites linked to them. This method helped show the most useful and trusted websites first. They called their new search engine Backrub, but later renamed it Google, based on the word "googol," which means a huge number (1 followed by 100 zeros).

Building Google

At first, Google was just a school project. But as more people used it, Page and Brin realized that it could become something much bigger. In 1998, they started Google as a real company from a small garage in California. Their search engine quickly became popular because it was fast, easy to use, and gave better results than others. By the early 2000s, millions of people were using Google every day.

Challenges and Success

Starting a company was not easy. Larry and Sergey had to convince investors to give them money to grow Google. They also had to compete with other search engines that were already well known. But they never gave up, and their hard work paid off. Over time, Google expanded beyond search. They created other tools like Gmail, Google Maps, YouTube, and Google Chrome. Today, Google is one of the biggest technology companies in the world.

The Legacy of Larry Page and Sergey Brin

Larry Page and Sergey Brin changed the way people use the Internet. Their search engine helps millions of people find answers to their questions every day. Google is now part of a larger company called Alphabet, which focuses on new technology like self-driving cars and artificial intelligence. Even though they stepped down from running Google in 2019, their invention continues to shape the digital world. Their story shows that with curiosity, creativity, and hard work, one idea can change the world.
