

Name _____

Where Do Termites Live?

Short Answer Key

1. Termites live in dry wood, damp wood, or decaying wood.
2. Subterranean termites use their tunnels to travel safely and find food.
3. Termites in dry areas build mounds to store moisture and regulate temperature.
4. Termite mounds are designed to maintain the right temperature and airflow for the colony.
5. Termites are most commonly found in warm, tropical, and moist regions.
