

Name _____

The Daily Life of Termites

Short Answer Key

1. Termites are most active at night and twilight.
2. Worker termites gather food and maintain the nest.
3. Termites leave chemical trails, called pheromones, to find and guide others to food.
4. Termite nests are designed to regulate temperature and humidity.
5. Teamwork is important because it helps the colony function efficiently, with each termite performing a specific role.
