## The Dangers Termites Face

### Short Answer Key

1. Two predators of termites are ants and birds.
2. Extreme weather, such as heavy rains or droughts, can damage termite nests and reduce their food supply.
3. Termites groom each other to remove harmful fungi and parasites.
4. Ants are dangerous because they invade termite nests and steal food.
5. Teamwork helps termites survive by allowing soldiers to defend the colony, workers to maintain the nest, and all members to care for each other.
