## Lion Predators and Threats in the Wild

### Short Answer Key

1. Predators that might attack lion cubs include leopards, hyenas, and male lions from outside the pride.
2. Habitat loss makes it harder for lions to find food and safe places to live.
3. Lions groom themselves to remove parasites and stay healthy.
4. Lions hunt successfully by working together in groups.
5. Humans can help protect lions by preventing poaching and preserving their habitats.
