

Name _____

Rabbit Predators and Threats

Short Answer Key

1. Common predators of rabbits include foxes and hawks.
2. Habitat loss makes it harder for rabbits to find food and shelter, which reduces their chances of survival.
3. Rabbits help spread seeds and provide food for predators, making them an important part of the ecosystem.
4. Rabbits protect themselves by hiding in burrows and using their speed to escape.
5. Parasites like fleas and ticks can weaken rabbits and make them more vulnerable to predators and illness.
